CAREER OBJECTIVE

Computer Engineering student with strong interest in data-driven decision making, customer experience analytics, and operational efficiency improvement. Experienced in analyzing large-scale transactional data, building analytics-ready datasets, and translating insights into actionable business recommendations. Comfortable working in fast-paced, multicultural environments.

PROJECTS

- Amazon Market Basket Analysis & Customer Segmentation** Jan 2025
- Engineered scalable data pipelines to process and clean 1.8M+ transaction records, implementing automated validation and feature engineering workflows.
 - Developed customer segmentation model using RFM analysis and K-Means clustering, identifying 2 statistically significant segments with distinct spending patterns and purchase behaviors.
 - Applied Market Basket Analysis (FP-Growth) and Random Forest models to generate association rules, predict customer segments, and estimate customer spending for data-driven marketing strategies.
 - Tech Stack: Python, Pandas, NumPy, SQL, Scikit-learn, mlxtend, Matplotlib, Seaborn, Plotly Feb - May 2025
- Data Warehouse & Analytics Project**
- Designed and implemented a PostgreSQL-based data warehouse using Medallion Architecture (Bronze, Silver, Gold).
 - Built automated ETL pipelines to ingest and transform CRM and ERP data, reducing manual data preparation and enabling repeatable analytics workflows
 - Developed business-ready star schema models and SQL analytics to analyze customer behavior, product performance, and sales trends.
 - Tech Stack: PostgreSQL, SQL, ETL, Data Modeling, Star Schema, CSV, Git
- Wellness Center Management System** Mar - May 2025
- Designed normalized relational database with 7 tables supporting complete reservation lifecycle from booking to analytics reporting.
 - Implemented transactional SQL logic with prepared statements, foreign key constraints, and validation rules to maintain data integrity and prevent booking conflicts.
 - Built backend integration layer handling reservation state management and generating operational reports for business stakeholders.
 - Tech Stack: MySQL, PHP, ER Modeling, HTML, CSS, JavaScript

WORK EXPERIENCE

- System & Operations Analyst (Restaurant POS Implementation)** Apr - Aug 2023
- Bukla Kumpaeng Restaurant | Bangkok, Thailand
- Designed and implemented FoodStory POS-driven operational workflows covering sales, inventory, and cost tracking.
 - Analyzed transactional sales and inventory data to support cost control, stock planning, and operational decisions.
 - Gained hands-on experience with real-world transactional data and its transformation into analytics-ready insights.
- Work & Travel Program – Florida, United States** May - Sep 2024 & 2025
- Worked in high-volume restaurant environments, handling real-time order processing, inventory tracking, and operational workflows, ensuring accuracy in fast-paced settings.
 - Collaborated with multicultural teams and rapidly adapted to new systems and tools, strengthening English communication and problem-solving skills.

TECHNICAL SKILLS

- Programming & Analytics** | SQL (JOINS, CTEs, Window Functions, Aggregations), Python (Pandas, NumPy, basic ML)
- Business & BI Tools** | Excel (VLOOKUP, XLOOKUP, Pivot Tables, Data Analysis), Power BI (Dashboard, KPI tracking)
- Databases & Warehousing** | PostgreSQL, MySQL, Snowflake, ETL/ELT Pipelines, Data Modeling (ERD, Star Schema)
- Others** | Git, GitHub, Basic Statistics, Google Sheets

EDUCATION

- King Mongkut's University of Technology Thonburi (KMUTT) - Bangkok, Thailand**
- Bachelor of Engineering, Computer Engineering | GPA : 3.34 | Expected Graduation: May 2027
- Relevant Coursework:** Database Systems, Big Data Engineering, Data Models, Data Structures, Algorithms, Software Engineering, ERP Systems, High Performance Computing and Cloud Technologies
